

PTC Integrity/RV&S Migration Solutions

Jama Connect® is a modern requirements management alternative to PTC Integrity/RV&S with migration options scaled to meet the diverse needs of our customers.

Today's product, systems, and software development organizations must move fast without sacrificing quality. To meet this challenge, organizations require best-in-class software to scale development, save time, and ensure compliance with quality, safety, and security regulations.

As organizations make the transition from legacy requirements management to a more modern solution, a migration process is always necessary regardless of which tools are involved. There is no special advantage when moving between products from the same company such as IBM® DOORS® and IBM® DOORS® Next or PTC Integrity/Windchill RV&S and codebeamer because these tools were designed with different technical approaches to systems engineering and data storage.

Accepting the unavoidable need for data migration, it's more important to focus on selecting the right tool. Organizations choose Jama Software® and Jama Connect® to replace

PTC Integrity/RV&S over codebeamer and other solutions for several reasons:

- **Ease of use and access by diverse and distributed teams**
- **Speed of application configuration and adoption**
- **Flexible and secure deployment options**
- **100% focus on requirements management and traceability**
- **Responsive and expert in-house customer onboarding and support teams**

Switching from PTC Integrity/RV&S to Jama Connect requires a migration approach that scales to your people, process, and data. It's not just about migrating the data from one database to another; the effective onboarding and training of teams on the new solution is also a critical component to broad adoption and long-term success.

Flexible, Scalable Migration Solutions

Jama Software provides custom migration solutions to scale and meet the unique needs of every customer. Our staff works directly with you to adapt Jama Connect to fit your product, systems, and software development process, identify and migrate required data, and train your teams to rapidly adopt Jama Connect. Our consultants use a well-established workflow to understand your migration needs and safely move your data to Jama Connect.

Steps:

1. Pre-assess
2. Plan
3. Discover
4. Export
5. Import
6. Clean
7. Verify
- { repeat }

- 1. Pre-assess:** We meet with you on the optimal strategy and approach for the migration plan, often during an initial meeting, followed by data-model diagnostics done by our solutions team.
- 2. Plan:** We work with you to identify key stakeholders, assess the condition of your data, and create a documented plan for the migration.
- 3. Discover:** We provide discovery and Jama Connect Administration training to prepare your use of Jama Connect.
- 4. Export:** We condition your data before exporting it using Reqlf and record export validation metrics.
- 5. Import:** We transition your data into Jama Connect.
- 6. Clean:** We record import validation metrics.
- 7. Verify:** We provide a verification process to demonstrate when the migration is completed.

Whether you select the cloud or self-hosted deployment model, Jama Software provides a framework that supports a flexible approach to manage both the cost and risk of the transition from PTC Integrity/RV&S to Jama Connect. The goal of the migration process is to leverage PTC Integrity/RV&S' requirements information, while positioning new and migrated data to take advantage of a modern approach to requirements management with Jama Connect.

Jama Software® is focused on maximizing innovation success in multidisciplinary engineering organizations. Numerous firsts for humanity in fields such as fuel cells, electrification, space, software-defined vehicles, surgical robotics, and more all rely on Jama Connect® requirements management software to minimize the risk of defects, rework, cost overruns, and recalls. Using Jama Connect, engineering organizations can now intelligently manage the development process by leveraging Live Traceability™ across best-of-breed tools to measurably improve outcomes. Our rapidly growing customer base spans the automotive, medical device, life sciences, semiconductor, aerospace & defense, industrial manufacturing, consumer electronics, financial services, and insurance industries.
